Capstone assessment and sample feedback

Student Portal Launch SPL-27. Illustrative instructor feedback for the completed software example. The criteria and maximum points below reproduce DTA's existing capstone rubric. Scores and comments are authored examples, not a real assessment.

Criterion	Maximum	Example score
Business need feasibility and charter	15	14
Scope traceability schedule and cost	20	18
Stakeholders communication and risk	15	13
Quality delivery evidence and change control	20	18
Leadership Agile learning and strategic value	15	13
Closure lessons and professional evidence	15	13
Total	100	89

What worked well
Your scope exclusions stay consistent with the charter. The final cost reconciles to the baseline. The duplicate-submission failure has a named owner and a recorded retest. Your AI log explains which suggestions you changed and why.

What to improve
Add a resource-loaded schedule showing task-level allocations and cover for retesting. Expand the pilot record to show each participant's task evidence. Link the configuration handover to the specific recovery procedure and access matrix.

Next action
Update the supporting evidence, keep the original baseline visible, and explain any changes in a short walkthrough. For a real project, provide genuine approvals and test records rather than the simulated records used here.

Scoring guide: full marks require complete, consistent, justified work with evidence. Partial marks reflect missing detail or weak evidence; absent or unusable work earns zero. The instructor applies DTA's program assessment policy. This preview introduces no pass mark or certificate eligibility rule.
